

Material Handling Scoop

Material handling scoop is designed to be used for loading, filling and handling of any bulk material, including asphalt, aggregates and soils. The design of the device features a flat bottom and integral feet that make it a stable and convenient weighing scoop. Two sturdy aluminum bar handles help to enable balanced handling for easy and accurate placement of sample materials. The scoop is constructed of 24-gauge stainless steel with rolled edges and is 14"W x 23"L x 9"H.
