

Marshall Compaction Molds

The 4" compaction mold assembly is designed for preparing test specimens with the use of a mechanical and hand compactors. A mold is constructed from seamless tubing and plated. Comprised of a base plate, mold cylinder and extension collar, the base plate and collar are interchangeable with either end of the forming mold.

4in Mold

6in Mold

The 6" or 150mm compaction mold assembly is used for preparing test specimens with compactors. The mold is designed to be used with rotating or stationary mold models. A mold is machined from seamless tubing and plated. Comprised of a base plate, mold cylinder and extension collar.
