

Membrane Stretchers

Membrane stretchers are used for easy placement of latex membranes over soil specimen. A membrane inserts through the center of the tube, lapped over each end and a vacuum is applied at the hose fitting. The assembly is then slipped over the specimen and releases the vacuum for a secure fit of the membrane. Stretchers have an aluminum tube equipped with a barb fitting and vinyl tube for connection to the user's vacuum source.

Available Membrane Stretchers:

Part#	Description
3831	Membrane Stretcher 1.4"
3832	Membrane Stretcher 1.5"
3833	Membrane Stretcher 1.875"
3834	Membrane Stretcher 2"
3835	Membrane Stretcher 3"
3836	Membrane Stretcher 2.5"
3837	Membrane Stretcher 2.8"
3838	Membrane Stretcher 4"
3839	Membrane Stretcher 6"
