

HyVac1 Vacuum Pump

The HyVac1 vacuum pump is designed for continuous use. Featured on the device is a two-stage belt-driven pump that operates on the oil-sealed rotary vane principle. Ideal for distillation, filtration, degassing and as a roughing pump for high-vacuum systems. The design of the pump is mounted on rectangular steel base plate, and includes a V-belt and belt guard that encloses belt and pulleys. The HyVac1 pulls 29-30" maximum vacuum. Included is an initial supply of oil plus an extra quart of HyVac oil.
